Wikipedia gender gap
Various studies have been carried out in order to determine the gender percentages of contributors to Wikipedia content. Estimates of total female Wikipedia editors range from 8.5 percent (Wikimedia Foundation, 2011) to 16 percent (MIT/Northwestern, 2013). Estimates also varied by country, e.g., India (3 percent) and the United States (14 percent).

Homework gap
“School-age children in lower-income households are especially likely to lack broadband access. Roughly one-third of households with children ages 6 to 17 and whose annual income falls below $30,000 a year do not have a high-speed [I]nternet connection at home, compared with just 6 percent of such households earning $75,000 or more a year. Overall, 17 percent of teens say they are often or sometimes unable to complete homework assignments because they do not have reliable access to a computer or [I]nternet connection.”

News platform preferences
“Overall, 47 percent of Americans prefer watching the news (on TV and the web) rather than reading or listening to it. That is unchanged from 46 percent in 2016 and outpaces the 34 percent who prefer to read the news and 19 percent who prefer to listen to it. Just over four-in-ten U.S. adults prefer TV, compared with about a third who prefer the web, 14 percent who prefer radio, and 7 percent who prefer print.”

History majors
“Since the economic crisis of 2008 . . . of all the major disciplines, history has seen the steepest declines in the number of bachelor’s degrees awarded. In 2008, the National Center for Education Statistics reported 34,642 majors in history; in 2017, the most recent year for which data are available, the number was 24,266. Between 2016 and 2017, the number of history majors fell by over 1,500. Even as university enrollments have grown, history has seen its raw numbers erode heavily.”
