ACRL Guidelines

Guidelines for Instruction Programs in Academic Libraries

The final version approved by ACRL and ALA

Libraries work together with other members of the education community to participate in and realize the educational mission of the institution by teaching the identification, structure, intellectual access, and physical access of information, information sources, and information systems through the design and development of instruction programs and services. Planning for the systematic delivery of instructional services should be incorporated throughout the library’s activities, including the library’s comprehensive planning and budgeting process. In order to best assist academic and research librarians in the preparation and development of effective instructional programs, the following guidelines are recommended.

I. Program design

A. Statement of purpose

The library should have a written statement of purpose for its instruction program that: articulates its purpose of the instruction program with respect to the educational mission of the institution and the needs of the learning community; involves the academic community in the formulation of these goals; recognizes the heterogeneous nature of the learning community through the identification of varieties of learning styles, attitudes, education levels, and local settings and environments; recognizes that instruction programs not only prepare learners for immediate curricular activities, but also enable them to be effective lifelong users of information in its many forms and contexts; and reflects changes in the institution and learning community through periodic revision.

B. Identification of content of instruction

While each institution will determine instructional content based on the needs of its clientele, the library should have a clearly articulated focus with projected outcomes. For guidance in the selection of content of instruction, see the “Model Statement of Objectives for Bibliographic Instruction” (C&RL News, May 1987).

C. Identification of modes of instruction

Instruction takes place in many ways using a variety of teaching methods. These may include, but are not limited to: advising individuals at reference desks, in-depth research consultations, individualized instruction, electronic or print instruction aids, or group instruction in traditional or electronic classroom settings. The mode(s) selected should be consistent with the content and goals of instruction. Where appropriate, more than one mode of instruction should be used in recognition of the wide variety of learning styles of individuals. For suggestions and explanations of modes of instruction, see the Sourcebook for Bibliographic Instruction.

D. Evaluation and assessment

Evaluation and assessment are systematic ongoing processes that should gather data to inform decision-making regarding the instruction program. Data gathered should give an indication that the instruction program is supporting the goals set forth in its “Statement of Purpose for Instruction.” See the Evaluation Handbook for guidance. The evaluation or assessment plan should delineate exactly what measures are taken and who is involved in the assessment. The program should consider as many measures as poss-

Prepared by the ACRL Instruction Section’s Instruction Task Force which included Beth S. Woodard, University of Illinois at Urbana-Champaign; Carolyn Dusenbury, California State University-Chico; Keith Gresham, University of Colorado, Boulder; Frances Jacobson, University of Illinois at Urbana-Champaign; Poping Lin, Purdue University; Linda Parker, University of Nebraska at Omaha.
II. Human resources

To achieve the goals set forth in the library's instruction statement of purpose, the library should employ or have access to sufficient personnel with appropriate education, experience, and expertise to: teach individuals and groups in the campus community; design a variety of instruction programs and services; promote, market, manage, and coordinate diverse instruction activities; collect and interpret assessment data to evaluate and update instruction programs and services; integrate and apply instruction technologies into learning activities; produce instruction materials using available media and electronic technologies; participate in campus and faculty groups, committees, and departments that plan and execute education activities; and respond to changing technologies, environments, and communities.

III. Support

Support for a successful instruction program has many interdependent facets. The level of support necessary will depend on the scope and size of the program.

A. Instruction facilities

The library should have, or should have ready access to, facilities of sufficient size and number that are equipped to meet the goals of the instruction program and reach the instructional learning community. The instructional setting(s) should duplicate the equipment and technology that is available to users. At minimum, the facilities should allow the instructor to demonstrate information systems available to the library's users. It is desirable that the facilities provide individual hands-on experience for those being instructed. The instructional setting should be flexible enough to accommodate a variety of teaching methods and learning styles.

B. Staff work facilities

The library should provide convenient access to the equipment and services necessary to design, produce, reproduce, and update instruction materials in a variety of formats. The library should provide sufficient space for the preparation and storage of instruction materials.
C. Financial support
The instruction program should have adequate funds identified to attain the stated goals of the program. The funding for an instruction program should cover all personnel costs connected with the program, including but not limited to student, clerical, and technical assistance. The funding should cover supplies and materials; equipment or access to equipment; design, production, reproduction, and revision of materials; promotion and evaluation of the instruction program; as well as other identified costs. The allocation process should allow for equipment and software replacement and enhancement as changes occur. The funding should provide for training and continuing education of those involved in the instruction program.

D. Support for staff continuing education, training, and development
Nonmonetary support for continuing staff development helps to establish an atmosphere conducive to innovation and high morale. It is recommended that the library: provide staff members with a written description of the scope of their instructional responsibilities; provide a structured program for orientation and training of new instruction personnel (see the publication Learning to Teach for suggestions); and develop a program of continuing education or make available continuing education opportunities.

C&RL News 30th anniversary quiz
Here is the next installment of the C&RL News 30th anniversary quiz. Test your recollection of events that have been reported in the News since 1966.

1. How much did the federal government spend on libraries per person in 1995?
2. What is the British counterpart to C&RL News?
3. In the 1960s, West Virginia’s most famous author gave a copy of her new biography to the state’s oldest educational institution to bring its library collection to the 100,000 mark. Name this celebrated author and the institution.
4. When did the American Mathematical Society name an Ad Hoc Library Committee to study library issues that affect the mathematics research community?
5. How did the library at Butler University manage to get incoming freshman into the library before classes started?

Answers:
1. The government spent $0.57 per person on libraries in 1995, about the cost of a pack of gum.
2. The UC&R Newsletter, sponsored by the University, College and Research Section of the Library Association, is the British counterpart to C&RL News.
3. Pearl Buck gave a copy of Pearl S. Buck, A Biography, by Theodore F. Harris, to Bethany College.
4. The Ad Hoc Library Committee was named in 1989.
5. Butler University had a treasure hunt in the library.
