Introduction to animal law

Resources for online research and study

Animal law is the body of statutory and case law governing the treatment of nonhuman animals, including wildlife, companion animals, and animals used for research, entertainment, and food. Emerging rapidly on academic and legal horizons since 2000, entire programs of study at all levels are now dedicated to training students to be effective humane educators, attorneys, law enforcement officers, and citizens.

High-profile court cases, such as *SeaWorld v. California Coastal Commission*, along with the proliferation of animal protection documentaries, such as *Blackfish*, *Earthlings*, and *Tyke: Elephant Outlaw*, have raised profound questions about our treatment of other species. Animal protection is now a mainstream phenomenon, largely due to the Internet and social media providing instant visibility to and awareness of the critical issues of our time.

To effect progress, we must navigate the legal system. This compilation of key animal law repositories, sources of federal and state statutes, case law, open access animal law journals, programs of study, and LibGuides serves as a basic set of tools for locating and understanding the exciting and enduring discipline of animal law.
