Web browser market share
As of March 2009, Internet Explorer accounted for about 67 percent of Web browser usage. Firefox accounted for 22 percent, and Safari recorded about 8 percent. These numbers represent a steady increase in browser share since 2004 for Firefox and a steady decrease for Internet Explorer. In 2004, Internet Explorer recorded a 91 percent share while Firefox accounted for only about 4 percent.

Homeschooling
An estimated 1.5 million students were homeschooled in the United States in 2007. This represents an increase from the estimated 1.1 million students who were homeschooled in 2003. In addition, the percentage of the school-age population that was homeschooled increased from 2.2 percent in 2003 to 2.9 percent in 2007. Those numbers are up from 1.7 percent in 1999. The reason reported by the highest percentage of homeschoolers’ parents as being most important was to provide religious or moral instruction (36 percent). Twenty-one percent reported the most important reason was concern about the school environment, and 17 percent reported dissatisfaction with the academic instruction available at other schools.

Online sectors
Social networks and blogs are now more popular than e-mail. Defined as “member communities,” they have become the fourth most popular online category, ahead of personal e-mail. Social networking activity is growing twice as fast as any of the four other largest sectors: search, Web portals, PC software applications, and e-mail. As of December 2008, Internet searching was performed by about 86 percent of the online population, while e-mail was used by about 65 percent. Time spent on social networking sites is also expanding. In 2008, activity in member communities internationally accounted for one in every 15 minutes online; now it accounts for one in every 11.

Digitization milestone
“The Library of Congress will digitally scan The Heroic Life of Abraham Lincoln: The Great Emancipator as the 25,000th book in its ‘Digitizing American Imprints’ program, which scans aging brittle books often too fragile to serve researchers. The program is sponsored by a $2 million grant from the Alfred P. Sloan Foundation. The Library, which has contracted with the Internet Archive for digitization services, is combining its efforts with other libraries as part of the open content movement. The movement, which includes over 100 libraries, universities and cultural institutions, aims to digitize and make freely available public-domain books in a wide variety of subject areas.”
